

To provide the highest quality of care to our patients served by the San Pedro Valley Hospital District by enabling access to all necessary health information at the point of care

Our goal is to improve the quality of healthcare and medical services in Yuma County by providing a platform for securely sharing data and information among healthcare providers.

To provide ready access to complete & correct healthcare thru secure Health Information Exchange in Southeast Arizona

To create a sustainable system of electronic Health Information Exchange within the medical and behavioral community and beyond that enables consumers to receive better, safer, most cost-effective care

Arizona Community Partners HIE will create a secure framework that electronically shares health information to improve patient safety in our community. This effort will focus on integrating with other regional networks to share information among healthcare providers as well as patients.

To improve the health status of medically underserved populations through building and strengthening the infrastructure for a continuum of care (medical and mental health) from prevention to tertiary care for the uninsured and underinsured families living in Yuma County.
